

PEARL CYMBAL BOOM STAND

BC-2030

Instruction Manual

Congratulations on your purchase!
To get optimum performance of your BC-2030 Cymbal Boom Stand, please read this Instruction Manual before playing.

WingLoc

WingLoc's quick release design makes attaching and removing cymbals quick and easy.

To remove the WingLoc, pull the wings apart and lift the WingLoc straight up (Fig.1).

Fig. 1

To attach, keep the wings open and place the WingLoc and the Top Reversible Cymbal Washer over the Cymbal Post as shown (Fig.2).

To adjust, snap either one of the wings upward as shown in (Fig.3) and rotate the WingLoc until the desired tightness / looseness of the cymbal is achieved. Snap the other wing upward (Fig.4) to lock the WingLoc in place.

Fig. 2

Fig. 3

Fig. 4

Reversible Seat Cup

The Seat Cup is reversible and can be set to Float, to allow cymbals to move freely, when set in the position shown in (Fig.5-A) or it can Lock, to prevent rattle in recording situations, when set in the position shown in (Fig.5-B).

Reversible Cymbal Washer

The BC-2030 stands are equipped with Reversible Cymbal Washers with a Felt side and Foam side. With the Foam side against the cymbal, a bright, clear sound with long sustain is achieved. The Felt side gives a warmer and softer sound. Mix and match the top and bottom Reversible Cymbal Washers to find the sound you like best (Fig.6).

Fig. 6

GyroLock Tilter

The GyroLock Tilter is removable and can be attached at the end or through the middle of the GyroLock Clamp as shown in (Fig.7). For best grip, keep the two halves of the GyroLock Clamp parallel by adjusting the Key Bolt and Wing Bolt accordingly.

Fig. 7

NOTE

- Do not force the wings closed. If you feel resistance, rotate the WingLoc slightly to align the threads and try closing the wings again.
- Do not tighten the WingLoc when both wings are in the locked position to prevent wear to the threads.
- Keep WingLocs in the locked position when transporting to avoid breakage or loss.

A Stop Lock is provided to keep the GyroLock Tilter secure while playing. To set the Stop Lock, loosen the Key Bolt and slide the Stop Lock against the GyroLock clamp with the prong of the Stop Lock fitted to the groove of the GyroLock clamp, then tighten the Key Bolt securely (Fig.8-A and Fig.8-B).

Fig. 8-A

Fig. 8-B

Adding GyroLock Tilters

The BC-2030 will accept two or more GyroLock Tilters for added versatility (Fig.9). Additional GyroLock Tilters, part number TL-2030, can be purchased separately from an authorized Pearl dealer.

Fig. 9

The Telescopic Boom Arm can be swiveled horizontally and two or more GyroLock Tilters can be attached as shown in (Fig.10).

Fig. 10

Dual Boom Tilters

The BC-2030 features dual Boom Tilters. The Main Tilter tilts the entire boom section. The Second Tilter permits the Telescopic Boom Arm to pivot or to telescope.

Single Boom Tilter

If you wish, the BC-2030 can be converted to a boom / cymbal stand with a single boom tilter. To make this conversion, loosen the Key Bolt on the Counterweight and pull the Counterweight off the Boom Shaft then remove the Boom Shaft from the Main Boom Tilter as shown in (Fig.11-A). Insert the Boom Shaft into the Die-Cast Joint of the Center Tube as shown in (Fig.11-B). Set the height to your preference and tighten the Wing Nut on the Die Cast Joint securely.

Fig. 11-A

Fig. 11-B

Nodal Point Markings

The BC-2030's Main Boom Shaft, Upper Tube, Center Tube and Base Tube are marked in the center and at the two Nodal Points as shown in (Fig.12). Clamping the Main Boom Shaft, Upper Tube, Center Tube and Base Tube outside the two Nodal Point Marks allows the cymbal to vibrate freely (Fig.12). Clamping the Main Boom Shaft, Upper Tube, Center Tube and Base Tube between the two Nodal Point marks achieves a more controlled cymbal sound (Fig.12).

Fig. 12

⚠ CAUTION

- When making height adjustments, use one hand to support the tube while using your other hand to control the tension of the wing nut/wing bolt to prevent the tube from slipping and pinching fingers that may be in the way.
- When folding the tripod legs, be careful not to pinch your fingers between the legs and the stand.
- When handling tubular hardware do not put your fingers into the tubes to prevent injury to your fingers.
- For optimal stability, orient one leg in the same direction as the boom.
- Test the stability of the stand before using. If necessary, readjust the length of the boom, the direction of the boom, or weight of the load until the stand is sufficiently stable.
